No two individuals grieve alike. Sensitivity and respect for cultural, religious, and individual preferences should be pursued and accommodated to the extent that the investigation allows (1-13).

The healthcare team provides personal, compassionate, and individualized support to families while respecting social, spiritual, and cultural diversity (1-9, 11-13).

Refer to the child by their name (6, 10, 11).

Extend condolences (14).

Explain your role and that your goal is to help in this tragic situation. Provide contact information in writing. Explain the policies in the local jurisdiction that justify your role. Explain that this role is mandatory for all child deaths and that questions and procedures are not meant to be accusatory but rather to assist in determining how and why the child died (10, 11, 14-16).

Provide information in multiple formats (i.e., verbally, brochure, and website) on the basic death investigation process, including why it is necessary and required. Keep the language as simple as possible. Anticipate questions in advance. If a significant segment of your population is non-English speaking, offering similar brochures in commonly spoken languages for your area is appropriate. Access to non-family translators, including sign language for deaf families, should be available (1-13, 17-19).

Provide next of kin with reasonable expectations. Convey what is known and not known, including time frames (if known), what may occur, how they will find out the cause of death, and who they can contact if they have questions (6, 10, 11, 17-19).

Provide information on resources available to the next of kin to assist them in their grief early in investigation. Provide care for the bereaved members of the patient’s family that may include information and arrangements for bereavement care services, and follow-up with family to address any concerns or questions (1-3, 6, 11-13, 20).

Provide information on choosing a funeral home, burial options, and financial assistance if appropriate. Provide written resources for bereavement, burial services and assistance, as well as any local support services available after death of an infant/child. Recognize that if the family does not have a medical home, the emergency department may need to assume the role of assessment and referrals for ongoing needs.

Maintain an unbiased, nonaccusatory sensitive approach to parents during the investigation. Irrespective of whether there are concerns about criminal intent, there should be a respect for privacy, dignity, and comfort for families of deceased infants and children.

</table>
Do not speculate on the cause of death. This biases the investigation and can undermine the medical examiner/coroner’s relationship with the family once the final cause of death is determined.

Observe the surroundings of the scene where the infant/child was found unresponsive and communicate findings to investigators. (See Chapter 4 for more information).

Explain parental rights after sudden child death.

Ensure safety of other children in the home while avoiding adding additional trauma to the event. Dedicate an officer, chaplain, or victim advocate to sit and play with surviving children away from the active investigation and out of sight of their deceased sibling.

If desired by families, allow families to observe resuscitative efforts and when discontinued, explain rationale in clear and simple terms. Have a single staff member available to be present with family members during resuscitation to answer questions and provide support.

When permissible to medical death investigators: allow the next of kin, when they desire it, to be with the child’s body for even a short time, with supervision, for goodbye rituals that contribute to a healthy grieving process. Families should be aware and counseled on the need/rationale for investigation protocols.

The health care team clarifies with the family the child’s medical home and promptly notifies the child’s primary care provider and appropriate subspecialty providers of the death and, as appropriate, coordinates with the medical home and primary care provider in follow-up of any postmortem examination.

Idenification and notification of medical examiner/coroner regarding all deaths, as directed by applicable law. Routinely offer postmortem autopsy to families for all nonmedical examiner/coroner cases.

The ED health care team uses a patient-centered, family-focused, and team-oriented approach when a child dies in the prehospital or ED setting.

Offer to contact additional family members to be present with family for support.

Hospitals and MDI agencies should establish a single point of contact – for example, a “Decedent Affairs Officer” or, where resources allow, an “Office of Decedent Affairs” – to coordinate communication between hospital personnel with an interest in the case (attending physicians, hospital pathologists, hospital quality committees, risk managers, etc.) and the medical examiner. The same point of contact should coordinate communication between hospital personnel and next of kin. The hospital’s point of contact should be identified in all communications sent to the medical examiner and next of kin.

<tr>
<td>The medical examiner’s decision to accept or decline jurisdiction of a case referred for review should be communicated to the referring hospital within a reasonable time frame (6, 11).</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>X X</td>
<td></td>
</tr>
</tbody>
</table>
EMD should establish a single point of contact, which could be accomplished by maintaining a central telephone number, to coordinate communication between EMD and parties with an interest in the case (next of kin, the referring hospital, etc.). State and local governments should provide adequate funding to facilitate effective communication between the medical examiner and parties with an interest in the case (6, 10, 11, 25, 26).

With EMD approval before or at autopsy: offer to provide memorial keepsakes (photos, lock of hair, hand prints, foot prints, etc.) or offer keepsake collection at funeral home if post-autopsy and release from EMD (10, 23).

Unless the case is the subject of an ongoing criminal investigation and release of information would compromise the investigation or the prosecution of a criminal case, the medical examiner should, upon request, share preliminary autopsy findings with next of kin, the referring hospital, and other parties with a legally-defined interest in the case. Final autopsy results should be shared promptly with requesting parties when they become available (6, 11).

Prepare next of kin for the condition of the remains (6, 10, 11).

Recognize and respect the family’s right and need to understand how and why their loved one died. The worst news can be delivered with sensitivity and compassion. The method of communicating the final cause of death to the next of kin should be mentioned early on in the investigation. If the next of kin have a preference for a specific method (i.e., scheduled call vs. unanticipated call, letter, or meeting, etc.), considerations should be given to attempt to comply with their wishes (6, 10, 11, 23, 25, 30).

The medical examiner should make himself or herself available to participate in a post-autopsy conference with the next of kin and other parties of the next of kin’s choosing, such as the deceased’s attending and/or personal physician(s). The medical examiner should also make a reasonable effort to make himself or herself available to hospital personnel to discuss the final autopsy report (6, 10, 11, 23, 25, 30).

Upon request, the medical examiner should provide information to next of kin regarding options for obtaining an independent autopsy or a review of the medical examiner’s findings and conclusions (6, 25).
